Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-19 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a method for making a catalyst containing zeolite, gallium and an aluminum phosphate binder, wherein the composition is treated with a

Art Unit: 1755

dilute acid solution, does not reasonably provide enablement for the instantly claimed subject matter wherein the binder alone is so treated. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. The specification does not specifically disclose treating the binder material as claimed. The specification teaches so treating the catalyst composite. Accordingly, the claimed method for making a binder is not commensurate in scope with the subject matter set forth in the instant claims.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-19 are incomplete and confusing because they are internally inconsistent. The preamble recites a "method for producing a dehydrocyclodimerization catalyst", but this is not what is claimed in the following process steps. The process as claimed produces a phosphorus modified alumina, not a catalyst composition.

Claims 2, 3, 13 and 14 further lack antecedent basis for the recitation of "the treating". It is unclear which step takes place under the claimed conditions.

Art Unit: 1755

The recitation of "the drying" in claims 4 and 15 is also unclear because there are two drying steps in the independent claim, so it is not possible to ascertain which step is being limited.

Claim 10 recites a chloride compound for which there is no antecedent basis in the independent claim.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Applicants are advised that any evidence to be provided under 37 CFR 1.131 or 1.132 and any amendments to the claims and specification should be submitted prior to final rejection to be considered timely. It is anticipated that the next office action will be a final rejection.
